

Photo Competition Manager - Installation Instructions

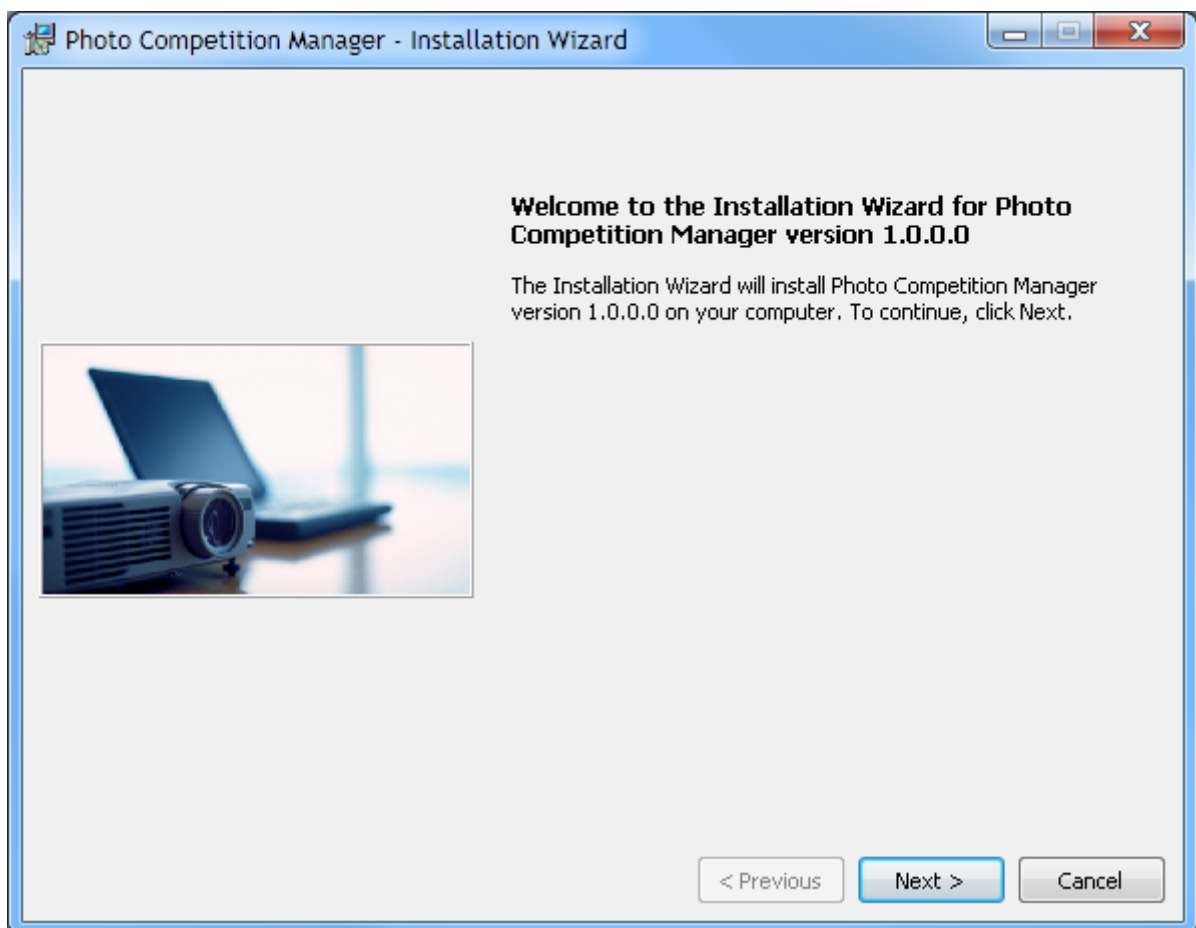

Please note: The Photo Competition Manager application will only run under MS Windows.

The first step is to download and run the Installation program. Click on the download link of the latest version of the application: <http://www.spectrumsound.co.za/pcompman/pcompman.html>

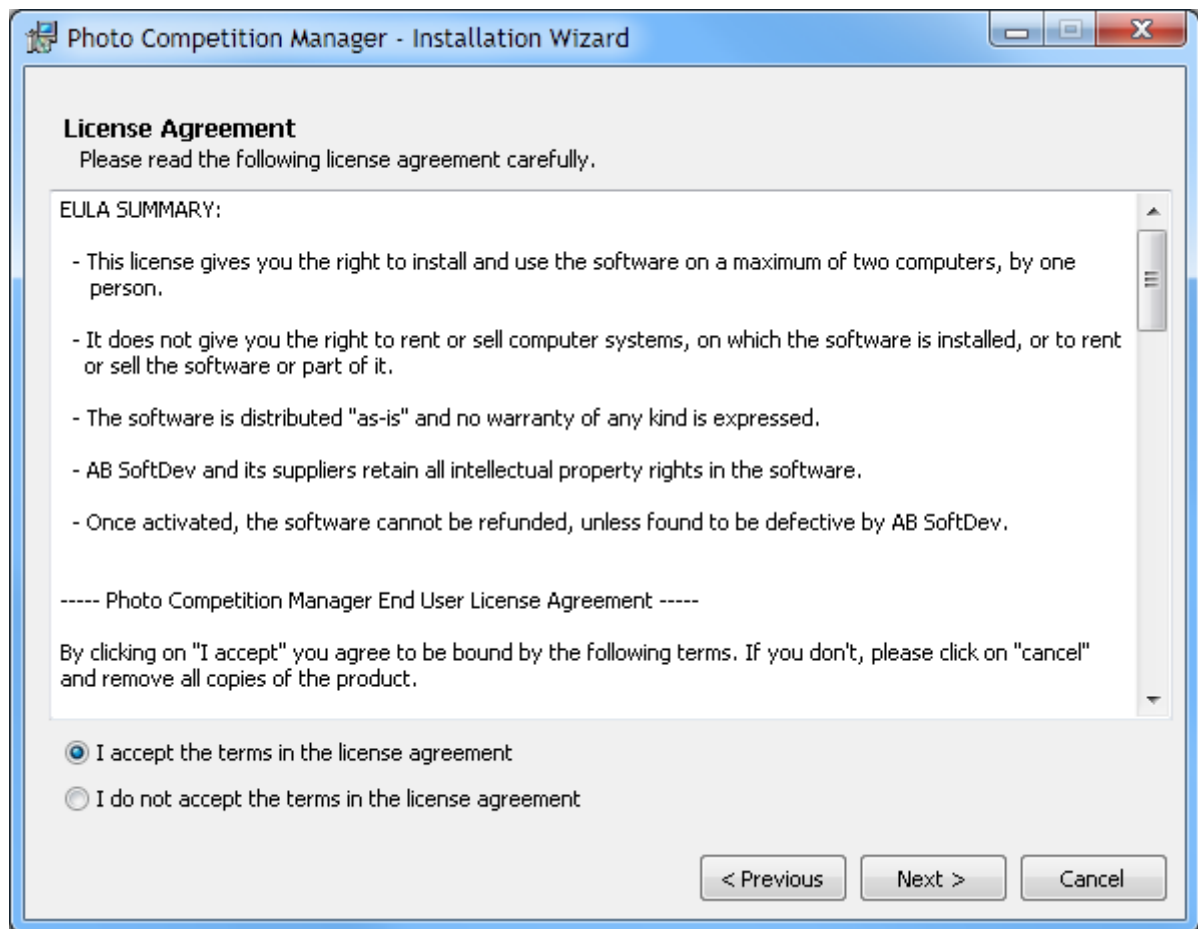

Click on the button labeled **Run** in the dialogue box. If a Security warning asks “Do you want to install and run the PCompManIns.exe?”, click **Yes**.

If you cannot see a **Run** button, please **Save** the file – right-click the file and select Save As. I suggest you save it on the desktop. Now navigate to the desktop (or wherever you have saved the file). If you have saved it to your desktop, it should be visible if you minimize all windows. Next you’ll have to run the installer. You need to have administrative rights to install applications in Windows 8, 7 or Vista and therefor you might need to right-click the PCompManIns.exe file and select **Run as administrator** to begin the installation process. If you do have administrative rights by default you may simply double-click or right-click and Open the downloaded file.

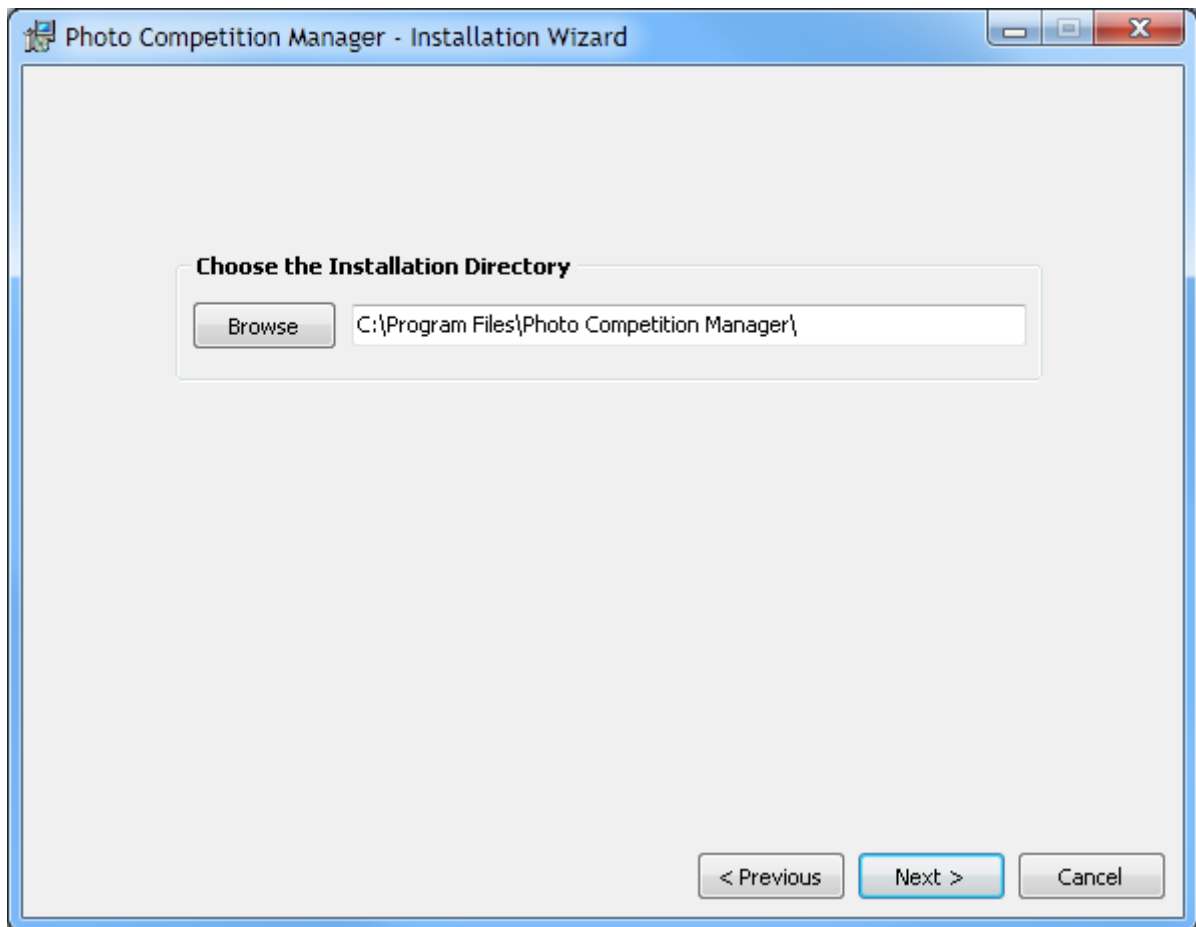

The first page is just a Welcome page. Click the **Next >** button to continue.

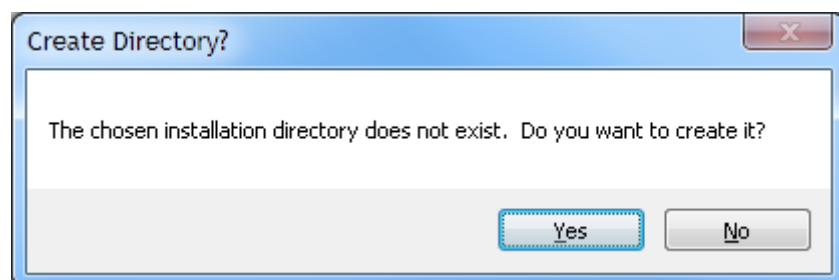

On the following page you'll have to read and accept the End User License Agreement in order to continue. Once you've read the EULA and selected the **I accept the terms...** option, the **Next >** button will be enabled. Click the **Next >** button to continue.

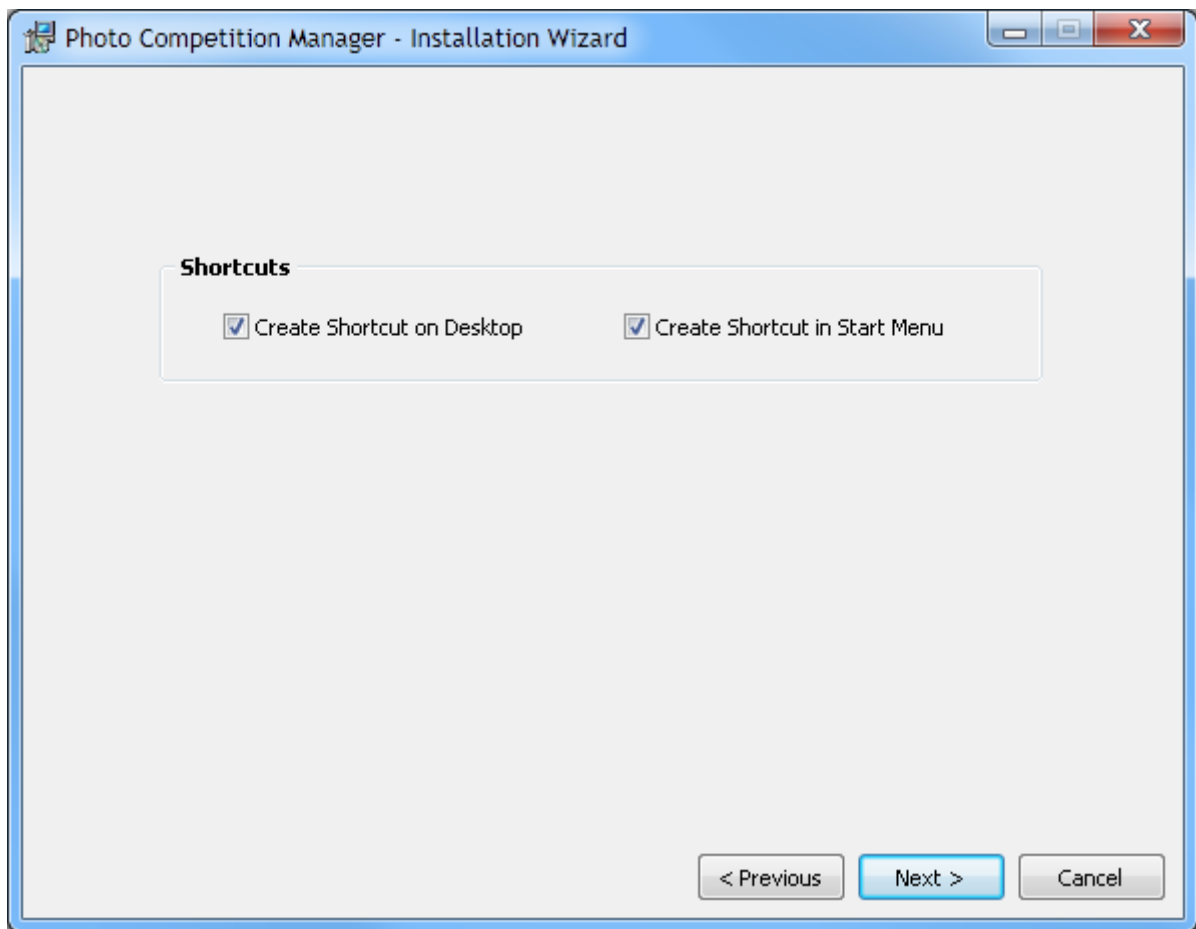

On the following page you can change the Installation Directory, if you desire. Normally you would just use the default directory. Click the **Next >** button to continue.

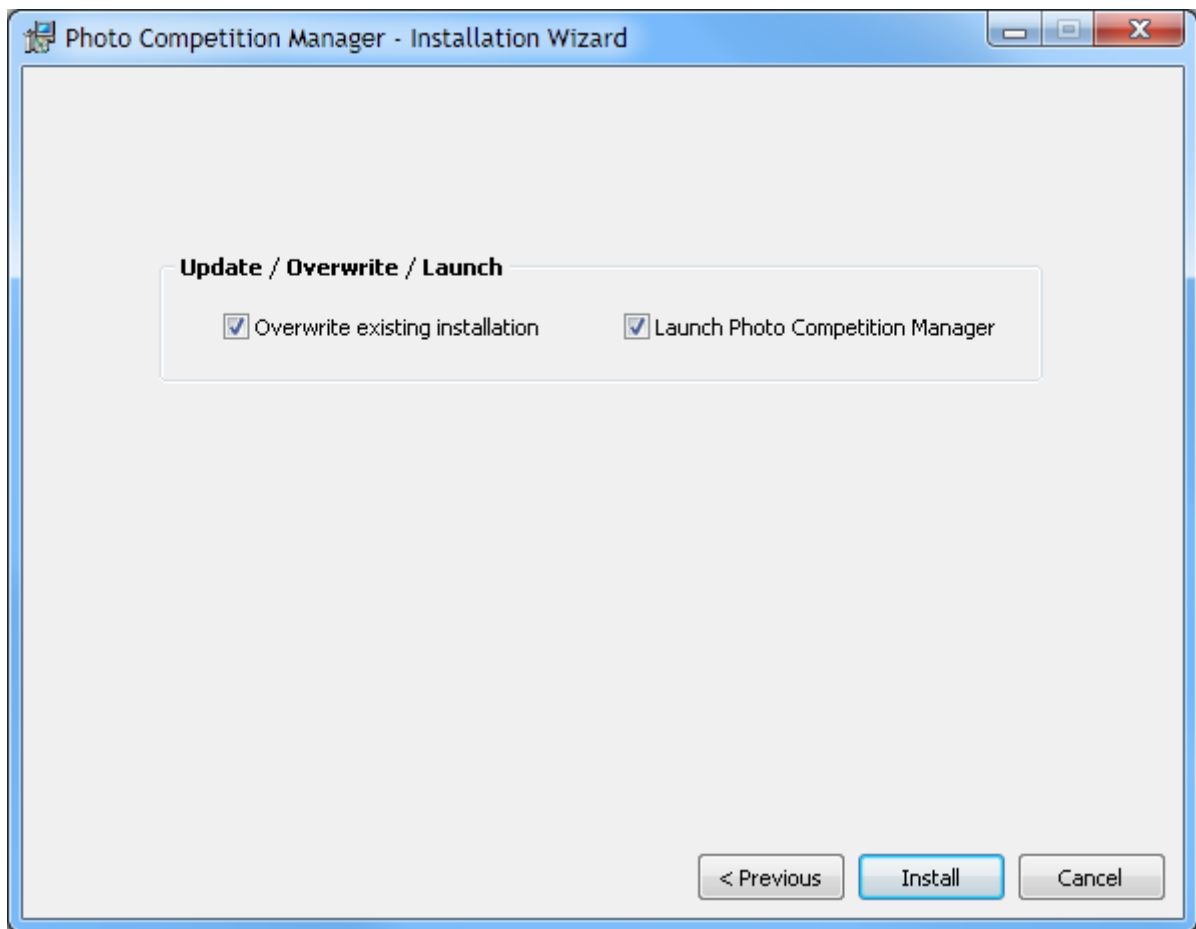

If the selected installation directory does not exist, a confirmation dialogue will be displayed to confirm that the installation directory will be created. Click **Yes**.

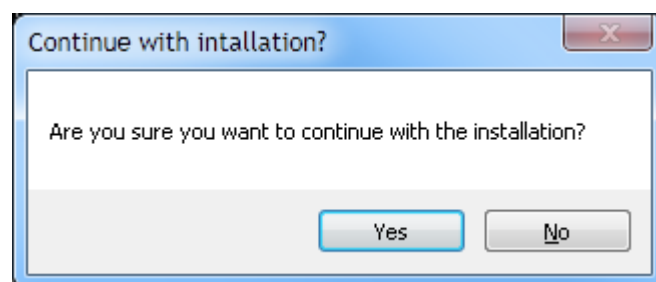

On the following page you can select where you want shortcut icons created; by default, icons will be created on the Desktop and in the Start Menu. Uncheck either or both options if you don't want shortcuts created. Click the **Next >** button to continue.

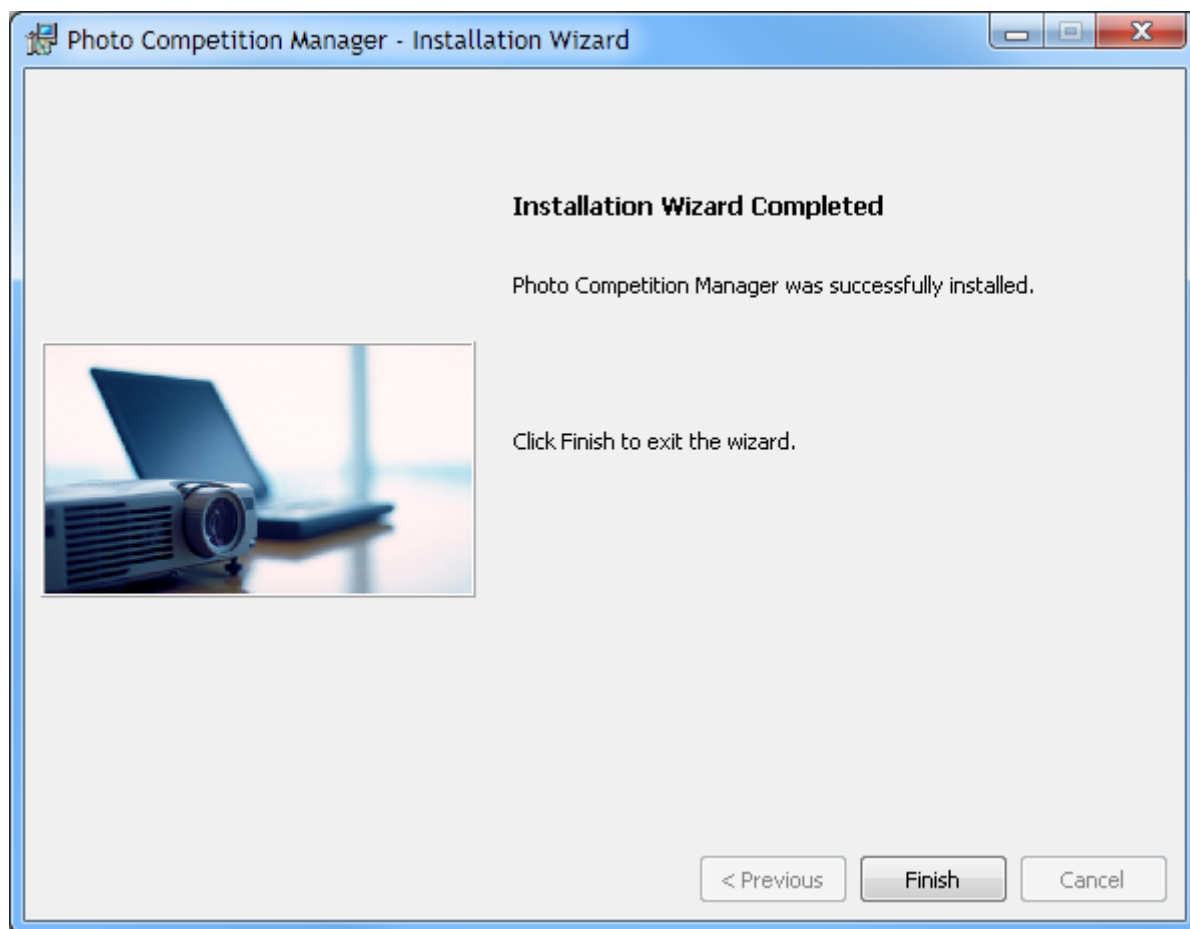

On the following page you can select to overwrite (and update) a current installation of the **Photo Competition Manager** application and you can select to automatically launch **Photo Competition Manager** after a successful installation. By default, both options are selected. Click the **Install** button to continue.

A confirmation dialogue will be displayed to confirm the start of the installation. Click **Yes**.

After a successful installation the following page will be displayed – click on the **Finish** button to close the Installation Wizard.

If the option to launch the application after installation was selected during the installation process, the **Photo Competition Manager** should open automatically.
